

Figure S20. Overlap of thalamic and parietal activation, fixation only task condition. **(A)** Statistical t-maps showing BOLD activation on the inflated cortical lateral surface for dPul stimulation overlaid together with LIPd-a or dPul-LIPd-p stimulation. **(B)** Conjunction maps showing the overlap of activation elicited by the stimulation of dPul with LIPd-a (top row) and dPul with LIPd-p (bottom row). Major overlap regions are labeled. For reference, middle row shows the NMT v2 CHARM regions in STS, warped to the individual brain anatomy together with the combined contrast overlap contours from the **Figure 4B** (dPul & LIPd-a conjunction).
