

Figure S23. Comparison of low current 100 μ A dPul and vPul stimulation effects, monkey C. **(A)** Activation maps on the inflated cortical surface, lateral view. Cortical regions activated by dPul stimulation are labeled in blue color, vPul – black. The CHARM template outlines of MT, FST and PGa areas shown as blue contours. **(B)** Same maps in the volume space, coronal sections (1 mm spacing). L – left, R – right, y - distance from AC-PC origin along the anterior/posterior plane in mm.
