

Figure S22. Comparison of stimulation effect strength in cortical areas elicited by dPul and vPul stimulation. **(A)** dPul and vPul activation maps on the inflated cortical surface (stimulated hemisphere), lateral view. Multiple V4d clusters are labeled. **(B)** Unthresholded difference of the dPul and vPul activation maps. Overlapping cortical activation ROIs are labeled, red color denotes ROIs that had stronger vPul stimulation effect derived from the ROI analysis, as seen in **(C)**. **(D)** The list of ROIs activated by stimulation of both sites, and results of paired t-test comparing stimulation effect strength elicited by dPul and vPul stimulation.
